INSPECTOR'S NAME

of the Oregon Department of Agriculture met with you to review your compliance with state laws and regulations relating to protection of the state's waters. You are required to contain, treat, hold, and dispose of wastes in a manner that does not adversely impact water quality.

Based on the inspector's observations and report, the Department concludes that conditions exist at your operation which are in violation of state water quality laws. The purpose of this **Notice of Noncompliance or Notice of Noncompliance & Plan of Correction** is to identify for you the conditions at your operation that are out of compliance and must be corrected. The Department is committed to working with you as you take the necessary actions to bring your livestock operation into compliance.

Description of Violation(s): ORS 468 B.025-Placing waste:

On or about 12/3/2017, based on a report provided by Tillamook Farm Power to ODA, a pump failed at the digester located at 23 Evergreen Drive in Tillamook, OR, resulting in digested effluent entering the effluent control pond through an overflow pipe from the digester vessel. The effluent control pond overflowed and the discharge flowed through multiple fields that ultimately flow into Holguartín Slough. ODA collected water samples on 1/25/2018 during a routine CAFO inspection that showed state water quality standards for bacteria were exceeded.

Required Corrective Action(s):

see continuation

To correct the violation(s), you are directed to take the following actions by the date(s) indicated.

- From receipt of this document as long as the facility operates, the facility operation must not result in waste being placed in a location where such wastes are likely to escape or be carried into waters of the state by any means.

Thank you for your cooperation in these matters. If you have any questions, please contact me.

Under the Oregon Plan for Salmon and Watersheds, Oregonians across the state are working together in a new spirit of cooperation to restore and maintain our rivers, lakes, and streams for multiple uses. By completing the measures described above, you can do your part to protect and improve water quality.

Sincerely,

INSPECTOR'S SIGNATURE
